Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	30 September 2026
Team ID	SWTID-2026-1259
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Standard Laptop Request (Service Catalog)	Browse Service Catalog > Hardware and select "Standard Laptop" Place the order using "Order Now" View Order Status and the generated Request Number (REQ)
FR-2	Request Approval	Approval record generated for the approver on the request Approver approves the request from the Approvers section Requested Item (RITM) proceeds after approval
FR-3	Flow Creation (Flow Designer)	Create flow "Standard laptop task" (Application: Global, Run As: System User) Add "Service Catalog" trigger Activate the flow
FR-4	Automated Catalog Task Creation	Add "Create Catalog Task" action using the Requested Item from the trigger Set short description and description to "Laptop needs to Configured" Set Assignment group to "Hardware" and Approval to "Approved"
FR-5	Flow Assignment to Catalog Item	Open Maintain Items and select the "Standard Laptop" record In the Process Engine tab, remove other automations and add the "Standard laptop task" flow Save the catalog item record

FR-6	Task Tracking & Configuration by Hardware Team	Catalog Task appears under Catalog Tasks in the Requested Item Short description and assignment group are visible on the task Hardware team configures the laptop on arrival and closes the task

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	Simple, guided ordering through Service Catalog > Hardware > Standard Laptop > Order Now; the requester gets an order confirmation and request number, and no manual follow-up is needed to raise the configuration task.
NFR-2	**Security**	Flow runs as System User in the Global application; the request must be approved by the approver before configuration, and the task is assigned only to the Hardware group, so access follows ServiceNow role-based controls.
NFR-3	**Reliability**	Once activated, the flow runs on every Standard Laptop request and creates the catalog task automatically, reducing the oversight, delays and manual errors of the earlier process.
NFR-4	**Performance**	The catalog task is generated automatically by the flow as soon as the trigger fires, so there is no manual hand-off delay before the Hardware team can start configuring the laptop.
NFR-5	**Availability**	The solution is built on the ServiceNow platform, so ordering, approval and task assignment are available whenever the instance is available; the flow stays active to handle requests at any time.
NFR-6	**Scalability**	The flow is attached at the catalog item level, so it handles any number of Standard Laptop requests and can be extended to other catalog items or assignment groups without redesign.
