Project Design Phase
Proposed Solution Template

Date	30 September 2026
Team ID	SWTID-2026-1259
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	The current IT procurement process lacks efficiency and automation, causing delays and manual overhead for standard laptop orders. The configuration step is prone to oversight or delay, frustrating users and wasting IT resources.
2.	Idea / Solution description	An automated ServiceNow Flow Designer flow, 'Standard Laptop task' (Global, run as System User), with a Service Catalog trigger. After approval it runs 'Create Catalog Task' with short description 'Laptop needs to Configured' and assigns it to the Hardware group. The flow is attached to the Standard Laptop catalog item (Process Engine).
3.	Novelty / Uniqueness	Replaces manual task creation and follow-up emails with a no-code, event-driven workflow on the existing ServiceNow platform. Tasks are generated and routed automatically as soon as an order is approved.
4.	Social Impact / Customer Satisfaction	Laptops are configured promptly on arrival, so users wait less and can track status (REQ > RITM > Catalog Task). IT staff spend less time on repetitive coordination and the Hardware team gets a clear task queue.
5.	Business Model (Revenue Model)	Internal efficiency model: value comes from saved manual hours, faster laptop readiness and fewer errors. It can also be offered as a reusable ServiceNow catalog-automation template or implementation service.

6.	Scalability of the Solution	The same flow pattern can be reused for other catalog items (monitors, mobiles, accessories) and extended with notifications, SLAs, extra approvals or other assignment groups, across departments and locations.
