Project Development Phase

Model Performance Test

Date	30 September 2026
Team ID	SWTID-2026-1259
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Model Performance Testing: The project team shall fill the following information in the model performance testing template.

S.No.	Parameter	Values / Screenshot
1	**Model Summary**	Not applicable. This project implements a ServiceNow Flow Designer workflow for automating standard laptop procurement and configuration task creation.
	2. Accuracy – Training Accuracy	N/A – no machine-learning model or training process is described in the project source.
	Validation Accuracy	N/A – no machine-learning model or validation process is described in the project source.
3	**Fine Tuning Result (if Done)**	N/A – no fine-tuning activity is described in the project source.
	Validation Accuracy	N/A – no model validation metric is provided in the project source.

Project basis: The project source describes an automated ServiceNow Flow Designer process that creates a Catalog Task for standard laptop requests, assigns it to the Hardware group after approval, and supports streamlined procurement and configuration.

Note: No training accuracy, validation accuracy, fine-tuning results, or screenshots were provided in the project source, so these fields are marked N/A rather than estimated.
