Project Development Phase

Performance Test

Date	30 September 2026	**Team ID**	SWTID-2026-1259
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer	**Maximum Marks**	

Performance Testing:

Project team shall verify the ServiceNow Flow Designer workflow using the parameters below. Record actual observations and attach screenshots after executing each test.

S.No.	Parameter	Expected Values / Checks	Screenshot / Actual Result
1.	**Workflow Summary**	ServiceNow Flow Designer workflow named “Standard laptop task”. It uses a Service Catalog trigger and the “Create Catalog Task” action for standard laptop requests.	Verify the configured flow and capture a screenshot of the flow trigger and action. **Observed result:** Pending **Pass/Fail:** Pending
2.	**Approval Handling**	After the service request is approved, the flow should create the catalog task with Approval set to “Approved”.	Submit a Standard Laptop request, approve it, and record the observed result and screenshot. **Observed result:** Pending **Pass/Fail:** Pending
3.	**Catalog Task Details**	The created catalog task should use the short description and description “Laptop need to Configured”.	Open the generated catalog task and compare the short description and description with the expected values. **Observed result:** Pending **Pass/Fail:** Pending
4.	**Assignment Group**	The generated catalog task should be assigned to the “Hardware” assignment group.	Check the Assignment group field on the generated catalog task and capture a screenshot. **Observed result:** Pending **Pass/Fail:** Pending
5.	**Service Catalog Flow Assignment**	The “Standard Laptop Task” flow should be associated with the “Standard Laptop” service catalog item in Maintain Items > Process engine.	Inspect the Standard Laptop catalog item configuration and verify that the intended flow is selected. **Observed result:** Pending **Pass/Fail:** Pending
6.	**End-to-End Request Validation**	A Standard Laptop order should be available in the request/order status, and the related Requested Item should contain a catalog task with the expected details and assignment.	Place a test order, approve the request, open the Requested Item, and inspect its Catalog Tasks section. **Observed result:** Pending **Pass/Fail:** Pending

Project Objective

Automate standard laptop procurement tasks so that, after approval, a catalog task is created with the required description and assigned to the Hardware team. The workflow is intended to reduce manual intervention, delays, and task-allocation errors.

Conclusion / Test Notes

Complete this section after executing the tests. The source project document describes the intended workflow but does not provide measured performance results or completed test evidence.
