Project Development Phase

Performance Test

Date	30 September 2026
Team ID	SWTID-2026-1259
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	

Performance Testing:

Project team shall fill in the verification results and attach screenshots for the ServiceNow Flow Designer workflow described below.

S.No.	Parameter	Values / Verification	Screenshot / Result
1	**Workflow Configuration**	Flow named “Standard laptop task” is configured in ServiceNow Flow Designer with Application = Global, Run as = System user, and Service Catalog trigger.	To be verified; add screenshot of the saved flow.
2	**Catalog Task Creation**	The flow uses the “Create Catalog Task” action with the Requested Item Record. The short description and description are set to “Laptop need to Configured”.	To be verified; add screenshot of the action configuration and generated task.
3	**Approval Handling**	The generated catalog task is configured with Approval = “Approved” after the service request is approved.	To be verified; add screenshot of the approved request/approval record.
4	**Assignment Group**	The generated catalog task is assigned to the “Hardware” assignment group for laptop configuration.	To be verified; add screenshot of the task showing Assignment group = Hardware.
5	**Service Catalog Flow Assignment**	The created flow is assigned to the “Standard Laptop” catalog item through Maintain Items > Process engine.	To be verified; add screenshot of the Standard Laptop Process engine settings.
6	**End-to-End Request Validation**	Place a Standard Laptop order from Service Catalog > Hardware, approve the request, then inspect Requested Item > Catalog Tasks to confirm the task details and assignment.	To be verified; add screenshots of the request, approval, and catalog task.

Project Objective:

Automate standard laptop procurement and configuration using ServiceNow Flow Designer, so catalog tasks are created after approval and assigned to the Hardware team. The intended benefits are reduced manual intervention and errors, shorter user wait times, and improved IT resource allocation and productivity.

Note: The source project document describes the intended configuration and verification steps, but does not provide measured test results. Complete the result fields and insert actual screenshots after testing; do not mark a test as passed until it has been verified.
